

MG Services Technical Bulletin #19-02
Supercharger Installation on an XPAG Engine

TWO WEEKS !!! MARCH TECH SESSION TWO WEEKS !!!

COMING TO THE NORTHERN OHIO AREA

The complete XPAG engine assessment

The next tech session will be held at twelve noon, on Mar. 10th at Rodger Taylor's shop located at 670 Brookepark Road, Cuyahoga Falls, Ohio 44223.

The session will begin at twelve noon with a discussion about Tom's engine. We will review the information that he has gathered and we will talk about what we are looking for in his engine. We will then discuss what tests to use that will determine the conditions of the engine.

There is a refrigerator, so you can bring your own drinks and we can keep them cold. If you prefer a hot drink you are on your own. If you are like me, and you want the option to sit, you'll need to bring your own chair.

After our discussion, we will do various tests, including a compression test, a leakdown test, and we will be measuring each of the eight camshaft lobes. The tests should determine the performance of each of the intake and exhaust valves, the head gasket, and the piston rings,

After the data is collected and reviewed, we will then discuss the supercharger installation with the knowledge of how the engine is actually performing. With this information we can determine if the engine would be a good candidate for the supercharger installation.

Remember the clocks are changed the Saturday night before the tech session
You don't want to miss the first hour of the tech session

Don't forget to RSVP Email at autographics99@hotmail.com
or call 513-532-1795

Due to the costs and unknowns about how many will attend these tech sessions, the printed materials associated with this tech session will be emailed to those who RSVP to the tech session and not provided at the tech session to those in attendance.

SO... DON'T FORGET TO RSVP as soon as possible!
